

## **SPRINT - 1**

Date	29 October 2022
Team ID	PNT2022TMID26651
Project	<b>Smart Waste Management system for metropolitan cities</b>

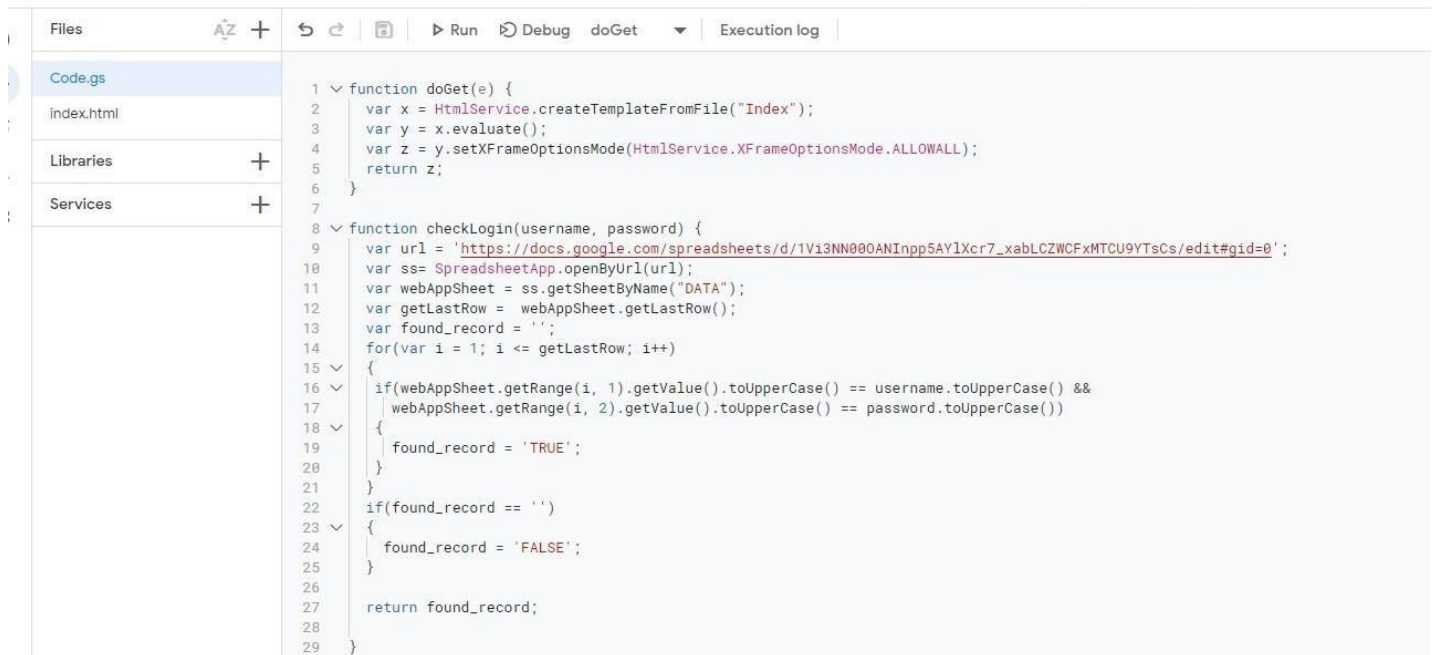

### **OBJECTIVE:**

A 24×7 monitoring system is designed for monitoring dumpsters. The ultrasonic sensor is used for measuring the level of waste in the dustbin. The DC motor powered platform is used for segregating wet and dry waste. The IR sensor and moisture sensor is used for separating wet and dry waste. If either of the containers is full then an alert message is sent from the dustbin to garbage collector and the cloud. In turn, based on the allotment garbage collector can clear the corresponding dumpster.
